

## Playing Back Footage Recorded onto a CD or DVD From a Silverline Prospect MPEG-4 DVR on a PC

Install the **Video Server E** software from the CD that came with the DVR. If you do not have Sun Microsystems Java Console installed on your PC, you will need to install it from here.

For more detail on software installation please consult the user manual

Put the CD with the footage on into your CD / DVD drive and wait for the CD / DVD to auto run.

If the disc does not auto run, click the **Start** button then click **My Computer** and double click your CD / DVD drive from there to display the files

In this window you will have a list of all the files that have been burned. Each camera has a separate file. Double click a file to view the video.

When you are asked to convert the file, click **Yes**.

The Footage will begin playing back, you can stop, pause, rewind and fast forward using the control panel at the bottom of the screen.
